

Using Scratch Teacher Accounts: My Classes

Sign up for a (new) Teacher Account here: <https://scratch.mit.edu/educators/#teacher-accounts>

If you have an existing Scratch account, send an email with your username, birth month/year (used when you created your account), and email address to teacher-accounts@scratch.mit.edu.

Benefits - Teachers:

Create multiple classes, each class can have multiple studios.

Create and manage student accounts (including password reset).

View all student shared projects and activity.

Manage multiple classrooms using the same Modify/Create projects.

Benefits - Students:

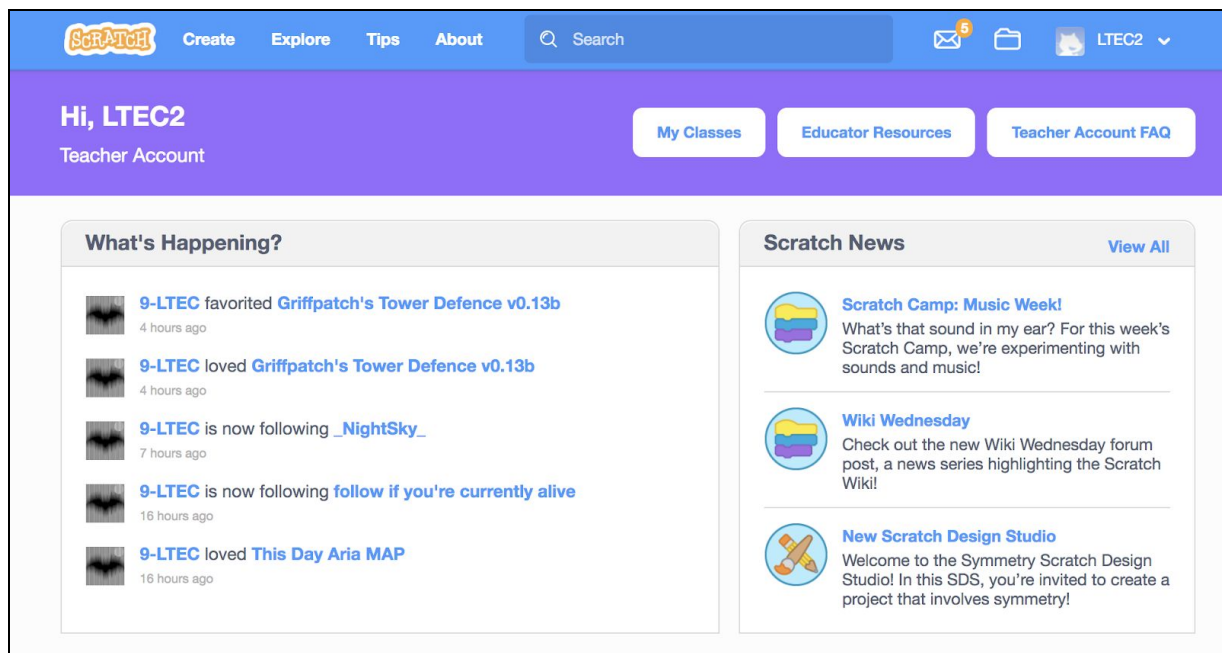

Students access all Modify/Create projects in one location.

Students remix and share their projects in their Class Studio.

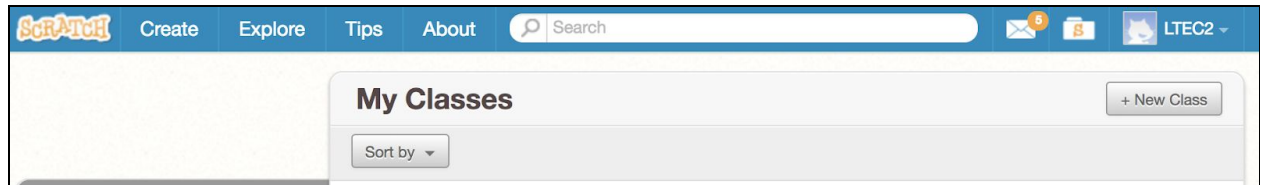

Students do need to Remix and Share their projects for you to access them - otherwise they will not appear in the Class Studio, you can use the remix tree to find them. Once a student's project is shared, it is shared publicly.

You cannot delete a student account, only they can. You can 'end' a class (class becomes inactive - students can no longer login to their accounts to access the class).

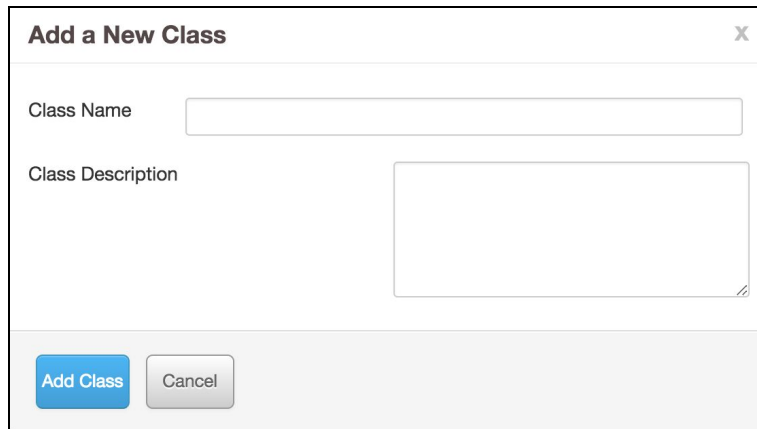

When you login to your Scratch Educator Account you will arrive at the home page:

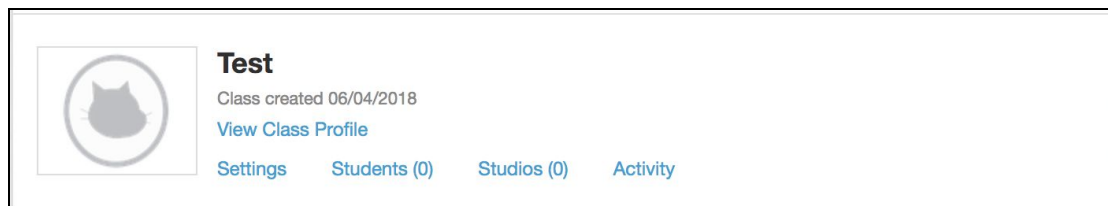

You can easily add a class by clicking My Classes, then New Class:

Then type in the Class Name and Description (optional):

A modal dialog box titled 'Add a New Class' with a close button (X) in the top right corner. It contains two input fields: 'Class Name' and 'Class Description'. At the bottom, there are two buttons: 'Add Class' (in blue) and 'Cancel' (in grey).

Your class will appear in the My Classes list:

From here you can add your students, add class studios, see the most recent student activity.

Add Students by:

1. Creating each account manually
2. Uploading a list of usernames and passwords (using a CSV or XLS file)
3. Sending students a sign-up link (students will create their own accounts)

A Class Studio:

Student Activity (Student LTEC_36 selected):

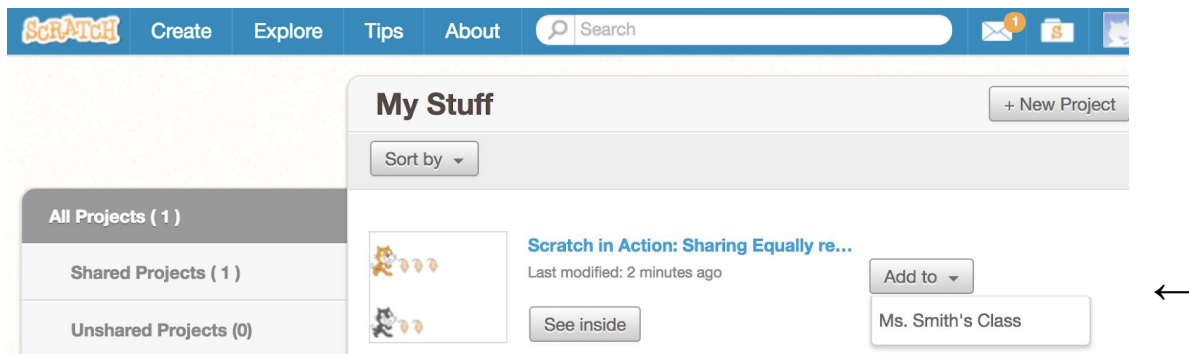

Once students have finished working on their project, they will need to add their project to your class studio. This will allow you to have access to their project. Remind students that their project needs to be Shared first before it can be to your class studio.

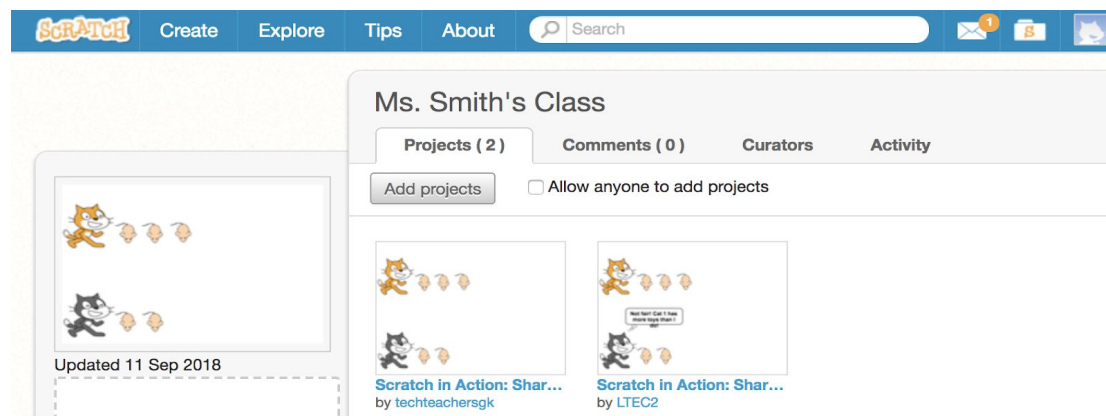

Students will click on their username (in the upper right hand corner), then click on My Stuff.

They will locate project they were working on and click the 'Add to' button. They will select your studio name from the list. (If they don't see this button, they need to go back and Share their project.)

You can then go into your class studio and view your students' projects.

These instructions are also included in the [Student Login Instructions](#) document.
